Series 6000 brass super-rapid fittings for plastic tubes

Tube external diameters: 3, 4, 5, 6, 8, 10, 12, 14, 16 mm

Fittings threads: metric (M3, M5, M6, M7), BSP (G1/8, G1/4, G3/8, G1/2, G3/4), BSPT (R1/8, R1/4, R3/8, R1/2)

SERIES 6000 BRASS SUPER-RAPID FITTINGS

Series 6000 super-rapid fittings have been designed with a special collet which provides an homogeneous tight on the whole surface of plastic tubes, thus ensuring high reliability and a long service life, also after connections and disconnections of the tube are repeated several times. Many types of threads are also available: metric, BSP and BSPT.

The Sprint® models are characterized by great adaptability of male threads with BSP parallel (ISO-228) female threads even in the presence of non-flat or irregular surfaces. This is possible thanks to a Teflon ring on the male thread, which guarantees a perfect seal between the two threads.

The wide range of these fittings includes the LF version ("Stop Fitting") which is equipped with a self-retaining device interrupting the air flow when the tube is disconnected and restores it when reconnected.

Accessory Mod. SP

Disconnecting tube set

The set includes keys to disconnect tubes with diameters between 4 and 12 mm.

Mod.
SP

Series 7000 super-rapid Compact fittings in technopolymer

Tube external diameters: 4, 6, 8, 10, 12, 16 mm

Fittings threads: metric (M5, M7), BSP (G1/8, G1/4, G3/8, G1/2, G3/4)

Series 7000 super-rapid fittings are realized in technopolymer.

Compact and lightweight, they are suitable for applications where weight can be a key factor.

The special collet, which has been designed properly for this series, provides an homogeneous tight on the whole surface of plastic tubes, thus ensuring high reliability and long service life, also after connections and disconnections of the tube are repeated several times.

The wide range of these fittings includes the LF version ("Stop Fitting") which is equipped with a self-retaining device interrupting the air flow when the tube is disconnected and restores it when reconnected.

GENERAL DATA

SERIES 7000 FITTINGS IN TECHOPOLYMER FOR WATER APPLICATIONS

Series 7000 Fluidics push-in fittings enable smooth passage of fluids in cooling systems. Liquid cooling systems are considered to be better than air cooling, in terms of efficiency, effectiveness, compactness and noise in a wide range of applications from computer servers to industrial equipment. The Series 7000 Fluidics fitting range has been designed with a special technopolymer, based on renewable raw materials, that allows the component to resist water absorption, temperature variations and cooling liquid additives. The material maintains constant dimensional stability in contact with different fluids and does not breakdown with age.

Advanced gripping characteristics make the Series 7000 Fluidics an excellent alternative to traditional fittings, guaranteeing a uniform tightening on the whole surface of the tube. This enhances high reliability and resistance to repeated connections and disconnections of the tube. Reliable connection, compact dimensions and easy installation in confined spaces are only some of the features that make these new fittings an innovative solution for a wide range of cooling systems.

- » BENEFITS:
- » Easy to connect and disconnect
- » Resistant to water pressure and erosion
- » Resistant to corrosion
- » Dimensional stability with water contact
- » Long life cycle

Series 8000 brass dual seal super-rapid fittings

Tube external diameters: 4, 6, 8, 10 and 12 mm
Fittings threads: BSP (G1/8, G1/4, G3/8, G1/2)

SERIES 8000 BRASS SUPER-RAPID FITTINGS

With its vast experience in manufacturing push-in connections for the pneumatics industry and its in-depth research into fluid power systems, Camozzi has developed Series 8000 super-rapid fitting evolving from Series 6000, which has been extensively tested in the pneumatic sector.

A patented additional seal provides a double tight on the tube, thus ensuring a highly reliable connection and avoiding any possible leakage that may occur. Connection and disconnection of the tube can be repeated several times without the use of proper tools and without compromising the performance of the fitting or the sealing on the tube. The NBR seals are standard and can be easily replaced with FKM and EDM seals.

GENERAL DATA

Diameters	ø 4, 6, 8, 10, 12 mm

Series H8000 nickel-plated dual seal super-rapid fittings

Tube external diameters: 4, 6, 8, 10, 12 mm
Fittings threads: BSP (G1/8, G1/4, G3/8, G1/2)

Series H8000 fittings are designed to be used in particularly dirty and dusty working environments. The patented system with double tightening on the tube guarantees a highly reliable connection and avoids any risk of leakage.

The special shape of the collar prevents the entry of impurities inside the fitting, guaranteeing performance over time, retention of the tube and easy connection and release.

Series H8000 fittings have a brass body, FKM seals for high temperatures (EPDM and NBR seals are also available) and can be used with pressures between -0.9 and 60 bar.

- » Protection against dust and debris
- » Silicone free
- » Suitable for vacuum

Series S2000 brass pipe fittings Sprint®

Fittings threads: BSP (G1/8, G1/4, G3/8, G1/2), BSPT (R1/8, R1/4, R3/8, R1/2)

SERIES S2000 BRASS PIPE FITTINGS SPRINT®

Series S2000 pipe fittings are characterized by great reliability of female threads, both BSP and BSPT, with non-flat surfaces. The patented Sprint models are provided with a particular torque system which avoids the use of liquid glues or PTFE band, making thus the mounting quicker.

Thanks to this system the connection and disconnection of the fitting can be repeated several times without compromising the seal on the thread.

Series 5000 quick-release couplings

Nominal diameters: 5, 7 mm

Couplings threads: G1/8, G1/4, G3/8, G1/2

Plastic tubes: 6/4, 8/6, 10/8; rubber hoses: 6x14, 8x17, 10x19, 13x23

Series 5000 quick-release couplings are suitable in situations where, for plant engineering or safety reasons, the connection or disconnection of tubing must be repeated several times. These operations can be performed with no need to release the pressure and therefore a considerable amount of time can be saved.

Series 5000 quick-release couplings with mini-profile DN 5 are compatible with couplings Rectus Series 21 - 90, Legris 21.

Series 5000 quick-release couplings with European profile DN 7 are compatible with couplings Cejn Series 320.

Flow rate diagram

The side diagram supplies some useful information about the most suitable model to be used in relation to the operating pressure and the required flow rate. The measurements were taken using the models indicated below and represent the ideal maximum flow rate conditions.

In case tubes of inferior quality are used, this might result in poorer performance.

Q (NL/min) = flow
 Δp (bar) = pressure variation

P_a (bar) = inlet pressure

Series 5000L and 5000LT quick-release couplings for the conditioning of moulds for plastics

Nominal diameters: 5, 7 mm

Couplings threads: G1/8, G1/4, G3/8

The Series 5000L and 5000LT couplings have been designed to connect tubes for water, air or oil, used within plastic injection and die casting moulds.

The Series 5000L and 5000LT couplings provide a quick connection and disconnection method for the replacement of heating and conditioning tubes directed towards the mould, as well as tubes coming from water collectors or sources.

- » Series 5000L couplings: without through-hole
- » Series 5000LT couplings: with through-hole

Couplings type "L" - operating principle and flow diagram

The female release couplings are designed to avoid accidental uncoupling. In fact uncoupling can only occur by pressing the male coupling inwards (1°), then the nut of the female coupling (2°) and finally pull the male coupling outwards (3°). The female couplings are realized to prevent any fluid leakage during connection and disconnection.

Q (l/min) = flow - P (bar) = load loss
Pa (bar) = inlet pressure

The diagram helps users choose the most suitable model in relation to the operating pressure and the required flow rate. The measurements were taken using the models indicated and represent the ideal max flow rate conditions. In case tubes of inferior quality are used, this might result in poorer performance.

Couplings type "LT" - operating principle and flow diagram

The female release couplings are designed to avoid accidental uncoupling. In fact uncoupling can only occur by pressing the male coupling inwards (1°), then the nut of the female coupling (2°) and finally pull the male coupling outwards (3°). For applications requiring a higher flow rate, the female coupling version with through hole is available. This solution allows a higher fluid flow but doesn't prevent fluid leakage during disconnection.

Q (l/min) = flow - P (bar) = load loss
Pa (bar) = inlet pressure

The diagram helps users choose the most suitable model in relation to the operating pressure and the required flow rate. The measurements were taken using the models indicated and represent the ideal max flow rate conditions. In case tubes of inferior quality are used, this might result in poorer performance.

Series T, MPL, PNZ tubing, spirals and accessories

Tubes: reinforced PVC, Polyamide (PA) 12, Hytrel Polyester, Polyethylene (PE), Polyurethane (PU).

Diameters: 4/2, 5/3, 6/4, 8/6, 10/8, 12/10, 15/12,5 mm

Camozzi offers a range of tubes and spirals with specific features which are suitable for several technical requirements.

Thanks to high-quality raw materials and with a low specific weight, these products are very small and lightweight. They also show high resistance against stress and flexural vibrations.

The high specularity of internal surfaces for the fluid passage (roughness of about 6 micron) allows to reduce the loosening of loads and to reach very high flows with same diameters.

Technopolymers used are particularly resistant to aging, thus ensuring the product a very long life.

Serie 6000 OX1 push in fittings:

Series 6000 OX1 super-rapid fittings have been designed with a special collet which provides an homogeneous tight on the whole surface of plastic tubes, thus ensuring high reliability and a long service life, also after connections and disconnections of the tube are repeated several times.

Serie VNR OX1 unidirectional valves:

They are available with Integrated Push-in Fittings. Thanks to their construction they operate at low pressure.

Serie 2000 OX1 brass pipe fittings:

The wide range of Camozzi pipe fittings, which includes straight, L and Tee, male or female couplings, guarantees the necessary support during the design of medical and analytical systems.
